

Rajiv Prinja is currently affiliated as senior researcher with Advanced Photovoltaics and Photonic Devices Laboratory (AP<sup>2</sup>D) in the department of Electrical and Computer Engineering at University of Toronto under Prof. Nazir Kherani. He also did his doctoral work with Prof. Kherani, focused on fabrication of nanocrystals using gas-agglomeration synthesis technique at Advanced Integrated Materials Synthesis (AiMS) facility and reported first successful synthesis of high-purity crystalline indium nitride nanocrystals including their passivation and phonon engineering. During this period, he was also responsible for the design, assembly and commissioning of the AiMS facility within the AP<sup>2</sup>D Lab. Before that he worked on three-way mixing in AlGaAs based waveguides under Prof. Amr Helmy in the department of Electrical and Computer Engineering at University of Toronto. He was awarded Hatch fellowship for sustainability and MITACS fellowship for materials for quantum technologies. He was visiting academic at Photon Science Institute, University of Manchester from October 2024 till March 2025. Furthermore, he has more than 8 years of industry experience as Senior Process Engineer in semiconductor nanofabrication where he worked on silicon solar cells, nanowire MOSFETs and photodetectors. His current research interests include synthesis and theoretical studies of novel nanomaterials for energy generation and management, bio-sensing, and quantum technologies.
